

Handling the new AESO Connection Process

Teshmont is able to provide support for customers wishing to connect to the Alberta grid.

Current Situation

On April 1, 2010, the Alberta Electric System Operator (AESO) implemented a new Connection Process. The new Connection Process provides customers further flexibility and access to the transmission system.

Solution

Teshmont, an internationally respected engineering consulting company with over 40 years of experience in the power transmission, can help companies connect to the grid in Alberta. In addition to providing power system solutions around the world, Teshmont understands the complexities of the Alberta transmission system. Teshmont has provided studies, solutions, and results to many established companies within the province, including AESO and AltaLink.

Teshmont possesses power system analysis software packages, such as PSS/E, and proven expertise to provide a streamlined and efficient interconnection of power facilities to the transmission system. Further, the Teshmont team can provide all planning studies, design, engineering, and commissioning services required to bring a project to completion as quickly as possible.

Next Steps

To learn more about how you can connect your load, generation, and intertie projects in a reliable, cost-effective manner, contact Teshmont Consultants LP.

Teshmont Provides

- Power System Planning
- Design
- Engineering
- Commissioning Services

for the connection of

- Generation
- Load
- Intertie Projects

In 2010, Teshmont will open an office in Calgary to better serve all clients in Alberta with connection, planning, and power system engineering work.
